Professional Summary

MCA (Computer Science) student with experience building software projects, automation workflows, and independent digital products. Combines technical problem-solving with strong analytical thinking, structured communication, and storytelling experience developed through software development, content publishing, and professional finance environments. Interested in understanding how technology products are built, adopted, and create value for users. Experienced in taking ideas from concept to execution through self-driven projects spanning automation, publishing, and web platforms.

Skills

Languages: Python, JavaScript, SQL

Backend Tools: Node.js, REST APIs, Git, GitHub, GitHub Actions

Frameworks Platforms: React.js, Firebase/Firestore, Streamlit, Netlify

Automation Data: Selenium, Pandas, Workflow Automation, Data Handling

Concepts: DBMS, Data Structures Algorithms, Backend Development

Analytical Communication: Technical Documentation, Structured Problem Solving, Storytelling, Content Publishing, Process Analysis, Professional Communication

Experience

Software Development Intern

May 2026 – Jul 2026 (Tentative) Alopna Softwares

- Working on backend development using Node.js and REST APIs.
- Built authentication and login API modules for internal backend practice workflows.
- Gaining exposure to API architecture, request handling, and backend integration processes.

Finance Trainee (CA Articleship)

Dec 2021 – Jan 2025 Institute of Chartered Accountants of India

- Worked in client-facing professional environments requiring clear communication, documentation, and process management.
- Coordinated compliance, reporting, and operational workflows while maintaining accuracy under strict deadlines.
- Developed structured analytical thinking, stakeholder interaction, and professional communication skills.

Selected Work

Open Shelf – Writing Publishing Platform

HTML, CSS, Netlify GitHub

- Designed and launched a platform for publishing and organizing long-form written content.
- Focused on reader experience, content accessibility, and structured presentation of stories.
- Managed content publishing workflows and deployment for continuous updates and maintenance.

BridgeNet – Alumni Management Platform

React.js, Firestore GitHub

- Built a platform to improve interaction and information sharing between students, alumni, and administrators.
- Designed role-based workflows to address different user needs and streamline access to alumni resources.
- Managed planning, implementation, deployment, and iterative improvements independently.

Pixie Event Discovery Tracking Dashboard

Python, Selenium, Streamlit GitHub

- Developed a system to help users discover and track local events through automated information gathering.
- Organized event information into structured dashboards for easier monitoring and decision-making.
- Maintained data quality through automated filtering, tracking, and scheduled workflow execution.

NSE Market Trend Automation Tool

Python, Selenium, Pandas GitHub

- Built a workflow for tracking market trends through automated collection and processing of public market data.
- Structured and organized information to support consistent monitoring and analysis.
- Implemented recurring execution processes for ongoing data collection and reporting.

2048 Game

JavaScript GitHub

- Created a browser-based implementation of the 2048 puzzle game with focus on user interaction and gameplay flow.

Independent Author Publisher

- Published independent long-form fiction works through Amazon Kindle.
- Managed the complete publishing process from concept development and writing to editing, formatting, and release.
- Developed storytelling, audience-focused communication, and content organization skills through long-form publishing projects.
